Introduction

This package allows you to render Quranic text in Typst using the authentic handwriting of calligrapher Uthman Taha from the **King Fahd Complex for the Printing of the Holy Quran**. It provides precise control over suras, verses, and individual words, supporting both **Hafs** (حفص) and **Warsh** (ورش) qira'at.

Features

- **High Quality:** Uses authentic fonts from the King Fahd Complex.
- **Granular Control:** Render specific Suras, Verses, or Words.
- **Ranges:** Support for ranges of verses and words.
- **Multi-Qira'at:** Supports **Hafs** and **Warsh**.
- **Bilingual API:** Full support for both English and Arabic function names.

Prerequisites

This package requires specific fonts to render the Quranic text properly. These fonts can be found in `fonts/`.

Important: Do not rename the font files (e.g., `QCF4_Hafs_01_W.ttf`). The package relies on these exact filenames.

You must make them available to Typst using one of the following methods:

1. **System Fonts:** Install the fonts found in `fonts/hafs/` and `fonts/warsh/` globally on your operating system.
2. **Specify Font Path:** Point Typst to the fonts directory using the `--font-path` argument when compiling:

```
typst compile --font-path ./fonts your-file.typ
```

Installation

Import the package using the following line:

```
#import "@preview/madinah-mushaf:0.1.0": quran, set-qiraa, set-bracket
```

Usage

Basic Rendering

Render a full Sura (e.g., Al-Ikhlas):

```
#quran(sura: 112)
```

﴿قُلْ هُوَ اللَّهُ أَحَدٌ ۝ إِنَّ اللَّهَ الْصَمَدُ ۝ لَمْ يَلِدْ وَلَمْ يُوَلَدْ ۝ وَلَمْ يَكُنْ لَهُ كُفُواً أَحَدٌ ۝﴾

Render a specific Verse (e.g., Al-Fatiha, Verse 1):

```
#quran(sura: 1, verse: 1)
```

﴿بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ ۝﴾

Advanced Selection

Render a range of Verses:

```
#quran(sura: 1, verse: (1, 4))
```

﴿بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ ۝ الْحَمْدُ لِلَّهِ رَبِّ الْعَالَمِينَ ۝ الرَّحْمَنُ الرَّحِيمُ ۝ مَلِكُ الْيَوْمَ الْئَيْمَنِ ۝﴾

Render a specific Word:

```
#quran(sura: 1, verse: 1, word: 2)
```

﴿اللَّهُ ۝﴾

Render a range of Words in a Verse:

```
#quran(sura: 1, verse: 1, word: (1, 2))
```

﴿بِسْمِ اللَّهِ ۝﴾

Qira'at

The package supports **Hafs** (default) and **Warsh**.

You can set the Qiraa globally:

```
#set-qiraa("warsh")
#quran(sura: 93, verse: 4)
```

﴿وَلَلَاخِرَةُ خَيْرٌ لَكَ مِنَ الْأُولَى ۝﴾

Or specify it for a single call:

```
#quran(sura: 93, verse: 4, qiraa: "warsh")
```

﴿ وَلَلَاخِرَةُ خَيْرٌ لَكَ مِنَ الْأُولَى ﴾

Brackets

You can enable or disable the decorative brackets.

Disable brackets globally:

```
#set-bracket(false)  
#quran(sura: 1, verse: 1)
```

﴿ الْحَمْدُ لِلّهِ رَبِّ الْعَالَمِينَ ﴾

Control for a single call:

```
#quran(sura: 1, verse: 1, bracket: false)
```

﴿ الْحَمْدُ لِلّهِ رَبِّ الْعَالَمِينَ ﴾

Arabic API

The package provides a fully localized Arabic API.

```
#قرآن(سورة: 1, آية: 1)
```

// تغيير القراءة

```
#ضبط_القراءة("ورش")  
#قرآن(سورة: 93, آية: 4)
```

// التحكم في الأقواس

```
#تفعيل_الأقواس(false)  
#قرآن(سورة: 112, أقواس: true)
```
